

NHS Data Model and Dictionary

Type: Change Request
Reference: 1915
Version No: 1.0
Subject: Diagnostic Imaging Data Set Version 2
Effective Date: 1 April 2026
Reason for Change: Change to Information Standards
Publication Date: 7 October 2025

Background:

The Diagnostic Imaging Data Set Version 1 was approved by the Information Standards Board for Health and Social Care (ISB) as [ISB 1577: Amd 10/2011 Initial Standard](#).

An update to the data set is required to enable the data set to meet a number of new user requirements that have emerged relating to diagnostic imaging data since the time it was introduced, particularly relating to understanding and supporting services more effectively, in order to improve outcomes of care.

The data set is being updated to Diagnostic Imaging Data Set Version 2. To achieve this the following has been undertaken:

- Amendments to National Code values and descriptions
- New Data Items
- Retirement of Data Items
- Changes to Organisation and Organisation Site Code Data Items to reflect changes to organisation reference data maintained and published by the Organisation Data Service, as defined by [DAPB0090: Health and Social Care Organisation Reference Data](#)
- Minor amendments to ensure alignment with the NHS Data Model and Dictionary.

To support the Information Standard, this Change Request updates the NHS Data Model and Dictionary to introduce the Diagnostic Imaging Data Set Version 2.

A short demonstration is available which describes "How to Read an NHS Data Model and Dictionary Change Request", in an easy to understand screen capture including a voice over and readable captions. This demonstration can be viewed at: https://datadictionary.nhs.uk/elearning/change_request/index.html.

Note: if the web page does not open, please copy the link and paste into the web browser. A guide to how to use the demonstration can be found at: [Demonstrations](#).

CHOOSE AND BOOK

Change to Supporting Information: Changed Description

[Choose and Book](#) is a national service that combines electronic booking and a choice of place, date and time for first hospital or clinic [APPOINTMENTS](#).

Choose and Book has been replaced by the NHS e-Referral Service.

Data Set specifications that contain references to Choose and Book will be replaced with references to the NHS e-Referral Service in the next version of the Information Standards, where they are not already correct.

DIAGNOSTIC IMAGING DATA SET OVERVIEW

Change to Supporting Information: Changed Description

Introduction

The Diagnostic Imaging Data Set was introduced by ISB 1577 Diagnostic Imaging Data Set, in response to the lack of detailed data on national data on Diagnostic Imaging tests for NHS PATIENTS. The original requirement came from the cancer strategy to improve GP direct access to certain Diagnostic Imaging tests, as a method was required to monitor implementation of this policy. The Diagnostic Imaging Data Set was introduced by ISB 1577 Diagnostic Imaging Data Set, in response to the lack of detailed data on national data on Diagnostic Imaging for NHS PATIENTS. The original requirement came from the cancer strategy to improve GP Direct Access to certain Diagnostic Imaging tests, as a method was required to monitor implementation of this policy.

The Diagnostic Imaging Data Set, however, has many benefits for example, to:

- Provide NHS data on GPs' direct access to tests, as well as tests requested via other referral sources. Benchmarking data will be fed back to GPs and, where appropriate, used to encourage increased use of tests, leading to earlier diagnosis and hence improved outcomes
- Provide more detailed NHS data than is currently available on test type (modality), body site of test and PATIENT demographics
- Enable analysis of turnaround times for tests
- Enable better analysis of cancer pathways by linking the National Cancer Registration and Analysis Service data to Diagnostic Imaging test data for cancer PATIENTS
- Allow Public Health England (PHE) to calculate more accurate estimates of the distribution of individual radiation dose estimates from medical exposures.
- Allow UK Health Security Agency (UKHSA) to calculate more accurate estimates of the distribution of individual radiation dose estimates from medical exposures.

From April 2012 it became a mandatory requirement that all providers of NHS-funded Diagnostic Imaging tests for NHS PATIENTS in England submit the central Diagnostic Imaging Data Set on a monthly basis.

The Diagnostic Imaging Data Set facilitates the collection of clinical data and the sharing of such data to underpin the delivery of effective Diagnostic Imaging. It is structured around the clinical processes of local Radiology Information Systems (RISs) used by NHS Trusts and NHS Foundation Trusts. It records administrative data relating to Diagnostic Imaging test ACTIVITY. It records administrative data relating to Diagnostic Imaging ACTIVITY.

Information is collected relating exclusively to Diagnostic Imaging test ACTIVITY. The Diagnostic Imaging Data Set describes Diagnostic Imaging tests that have taken place as part of a broader PATIENT PATHWAY. This includes PATIENTS referred from within the ORGANISATION, either as an out-patient, in-patient or from Emergency Care Department, or referred directly from their GP or another Health Care Provider. Information is collected relating exclusively to Diagnostic Imaging ACTIVITY. The Diagnostic Imaging Data Set describes Diagnostic Imaging ACTIVITY that has taken place as part of a broader PATIENT PATHWAY. This includes PATIENTS referred from within the ORGANISATION, either as an out-patient, admitted PATIENT or from an Urgent and Emergency Care Service or referred directly from their GP or another Health Care Provider.

The Diagnostic Imaging Data Set is collected from NHS funded providers of Diagnostic Imaging test SERVICES and submitted via a portal on the NHS England website. The submissions are processed and aggregate extracts are produced for provider and commissioner ORGANISATIONS and national groups such as the Department of Health and Social Care and Public Health England. This also allows linkage to the National Cancer Registration and Analysis Service. This also allows linkage to the National Cancer Registration and Analysis Service and other hospital data.

Please note that the collection of the Diagnostic Imaging Data Set does not replace any other collection of diagnostic data such as the Diagnostics Waiting Times and Activity Data Set (DM01), which should continue to be collected.

Mandation

The Mandation column indicates the recommendation for the inclusion of data.

- M = Mandatory: this data element is mandatory and the technical process (e.g. submission of the data set, production of output etc) cannot be completed without this data element being present
- ~~R = Required: NHS business processes cannot be delivered without this data element.~~
- R = Required: NHS business processes cannot be delivered without this data element
- P = Pilot: this data element is for piloting use only.

LOCAL PATIENT IDENTIFIER

Change to Attribute: Changed Dataset

A number used to identify a [PATIENT](#) uniquely within a [Health Care Provider](#). It may be different from the [PATIENT](#)'s casenote number and may be assigned automatically by the computer system.

Where care for NHS patients is sub-commissioned in the independent sector or overseas, the NHS commissioner PAS Number should be used. If no NHS PAS Number has been assigned the independent sector or overseas PAS Number should be used.

NHS NUMBER

Change to Attribute: Changed Dataset

The [NHS NUMBER](#), the primary identifier of a [PERSON](#), is a unique identifier for a [PATIENT](#) within the NHS in England and Wales.

This will not vary by any [ORGANISATION](#) of which a [PERSON](#) is a [PATIENT](#).

It is mandatory to record the [NHS NUMBER](#). There are exceptions, such as emergency care, sexual health and major incidents, as defined in existing national policies.

The [NHS NUMBER](#) is 10 numeric digits in length. The tenth digit is a check digit used to confirm its validity. The check digit is validated using the Modulus 11 algorithm and the use of this algorithm is mandatory. There are 5 steps in the validation of the check digit:

Step 1 Multiply each of the first nine digits by a weighting factor as follows:

Digit Position

(starting from the left) Factor:

1	10
2	9
3	8
4	7
5	6
6	5
7	4
8	3

9

2

Step 2 Add the results of each multiplication together.

Step 3 Divide the total by 11 and establish the remainder.

Step 4 Subtract the remainder from 11 to give the check digit.

If the result is 11 then a check digit of 0 is used. If the result is 10 then the [NHS NUMBER](#) is invalid and not used.

Step 5 Check the remainder matches the check digit. If it does not, the [NHS NUMBER](#) is invalid.

Further guidance is available from the [NHS England](#) website at: [NHS numbers for health and social care organisations](#).

Note:

This was [e-GIF](#) approved for use in NHS England.

[e-GIF](#) and the [Government Data Standards Catalogue](#) have been archived and are available for reference only.

TREATMENT FUNCTION CODE

Change to Attribute: Changed Dataset

A unique identifier for a [TREATMENT FUNCTION](#).

A [TREATMENT FUNCTION CODE](#) is recorded to report the specialised service within which the [PATIENT](#) is treated.

It is based on [MAIN SPECIALTY](#) but also includes approved sub-specialties and treatment specialties used by lead [CARE PROFESSIONALS](#) including [CONSULTANTS](#).

[TREATMENT FUNCTION](#), rather than the Royal College or Faculty specialty, is required on most activity returns and in the [Commissioning Data Sets](#).

[TREATMENT FUNCTION CODES](#) should be used for all data sets/collections unless otherwise stated e.g. [National Workforce Data Set](#) uses [MAIN SPECIALTY CODES](#).

[GENERAL MEDICAL PRACTITIONER](#), [NURSE](#) and Allied Health Professional/ [Biomedical Scientist/ Clinical Scientist](#) [ACTIVITY](#) should be recorded against the [TREATMENT FUNCTION](#) under which the [PATIENT](#) is treated.

Joint [Consultant Clinic ACTIVITY](#) should be recorded against the [TREATMENT FUNCTION](#) which best describes the specialised service.

Assigning a Treatment Function Code:

- Assigning a [TREATMENT FUNCTION CODE](#) for a [SERVICE](#) is a decision which must be made locally. For national reporting purposes, only the [TREATMENT FUNCTION CODES](#) listed in the table below must be used.
- Recording of activity according to [TREATMENT FUNCTION CODES](#) is not on the basis of the procedure carried out, but should be allocated according to whether a specialised [SERVICE](#) exists within the [Health Care Provider](#) for that [TREATMENT FUNCTION CODE](#), such as a [CLINIC OR FACILITY](#).
- [TREATMENT FUNCTION CODES](#) have not been mapped to procedures or [MAIN SPECIALTY](#).
- [TREATMENT FUNCTION CODE](#) should be assigned irrespective of the type of [CARE PROFESSIONAL](#) responsible. This is also applicable where the name of the [TREATMENT FUNCTION CODE](#) suggests it is limited for use by a particular Healthcare Profession.
- A change in [TREATMENT FUNCTION CODE](#), but no change in responsible [CARE PROFESSIONAL](#), does not initiate a new episode of care. For the [Commissioning Data Sets](#), the [ACTIVITY TREATMENT FUNCTION CODE](#) reported should be that which is recorded at the [CDS ACTIVITY DATE](#).

Note:

- New National Codes for [TREATMENT FUNCTION CODE](#) were introduced from 2 April 2020 as part of the update to the [DCB0028: Treatment Function and Main Specialty Standard](#). Submission of these codes for the Commissioning Data Sets is only possible where the healthcare provider has updated their CDS-XML schema version to CDS-XML version 6-2-0. Users of the original CDS-XML schema version 6-2 will be unable to submit the new codes introduced in the release of [DCB0028: Treatment Function and Main Specialty Standard](#) in April 2020 or the addendum to DCB0028 released in January 2021 to add a new [TREATMENT FUNCTION CODE](#) to represent Post-COVID-19 Syndrome Services.

Further information on the groupings and scope of each [TREATMENT FUNCTION CODE](#) is provided at: [Main Specialty and Treatment Function Codes Table](#).

Notes:

REFERRER CODE is the same as attribute CARE PROFESSIONAL IDENTIFIER.

REFERRER CODE is the code of the PERSON making the REFERRAL REQUEST. This will normally be a CARE PROFESSIONAL, GENERAL MEDICAL PRACTITIONER or CONSULTANT.

The intention is for this item to reflect the actual (true) referrer. For example, following a GENERAL MEDICAL PRACTITIONER referral, a CONSULTANT may subsequently refer the PATIENT to another CONSULTANT within the Hospital Provider Spell. The code of the CONSULTANT making the referral and the CONSULTANTS ORGANISATION should be recorded in the Commissioning Data Set (CDS) rather than the code of the GENERAL MEDICAL PRACTITIONER referrer. This also applies where a CONSULTANT refers an NHS PATIENT to another doctor for NHS-commissioned treatment at another NHS / non-NHS provider, or an overseas provider. Where the CONSULTANT CODE is not known, the Organisation Data Service Default Code C9999998 should be used.

In all other cases, the code of the referring GENERAL MEDICAL PRACTITIONER should be recorded, if applicable. When a locum refers, use the GENERAL MEDICAL PRACTITIONER PPD CODE of the GENERAL PRACTITIONER for whom the locum is acting.

See CONSULTANT CODE and GENERAL MEDICAL PRACTITIONER (SPECIFIED) for the codes available for CONSULTANTS and GENERAL MEDICAL PRACTITIONERS and GENERAL DENTAL PRACTITIONERS.

If the REFERRER CODE is not known or not applicable e.g. the PATIENT has self-presented, the Organisation Data Service Default Code (X9999998) should be used.
